

PickD — What's new

Thursday, August 27, 2026 · everything since the August 26 update · for everyone on the Ludlow floor

The short version

1. Ship: adding a bike to a completed order no longer turns it into a "part", every line now shows its **weight**, and a combined order opened from *Shipped today* shows the whole group.
2. Ship: one click on a SKU opens its detail without leaving Ship; the carrier row fills one line with the carriers this order can use — never FedEx on a truck order — and "..." holds the rest; photos show 2 + a menu.
3. FedEx orders show the **Recipient ID** to paste into Ship Manager, in Ship and in Double Check.
4. Ship: an **e-bike** is marked on its line and shown as its own carton in big figures — **1 carton · 1 Hudson E2 · 80 lbs** — for Audit Source (FedEx orders add the size).

What you will notice

1. Ship — a combined bike counts as a bike, and weights are on every line

BEFORE

Today. Order 881303 — one Riptide, registered since February — was combined into completed order 881301. Ship counted it as a *part* and asked for its weight; the screen said **2 pallets, 8 bikes and 1 part** that did not exist, and a total weight that made no sense. Pallets and total weight are what goes into **Audit Source** — where the load is quoted, the carrier chosen and the tracking number made — and bikes and parts are how that weight is built, so they have to be right. The only way out was a calculator: the weight of every bike, added by hand. In the end everything fit on **one** pallet.

NOW

Ship reads each line's bike/part and weight from the order itself the moment it opens, so the count is right from the first second. The **Order Items** table has a new **Lbs** column — what each line weighs (unit × quantity) — so the calculator is on the screen. A **?** in orange means no weight is on file yet. (The 2 pallets were 1 + the new order's own estimate; that part is by design and adds up once the count is right.)

Also fixed today — a combined order opened from *Shipped today*:

BEFORE

Open 303 / 301 again after it shipped — to answer the driver, or a claim — and it listed 7 lines under a header that said 9 units, with the Riptide from 881303 nowhere. Checking a shipped order against its list meant counting the pallet photo instead.

NOW

The whole group shows, with both orders under *Combined Order*, whether the order is still to ship or already shipped.

881303 / 881301 

Aug 27, 2026 · 4:01 PM [#881301] Order re-completed after reopen #1

ORDER ITEMS (7) 				
SKU	DESCRIPTION	LOCATION	SUBLOCATION	LBS
03-4041BL	HUDSON 21 2026 MIDNIGHT BLUE	ROW 3	F	90
03-4589GY	KOMODO 29 19 2026 RHINO	ROW 15	CD	45
03-4631GY	HIGHPOINT A2 V2 T7 2026 GRAPHI	ROW 27	A	45
03-4632GY	HIGHPOINT A2 V2 19 2026 GRAPHI	ROW 27	E	45
03-3745GN	TRAIL X A1 21 2026 MASH	ROW 28	A	45
03-4038BL	HUDSON 19 2026 MIDNIGHT BLUE	ROW 33	DE	45
03-3607GY	HUDSON E2 S/T 14 2026 THUNDER	ROW 51	F	80

Live tonight, after the fixes: **881303 / 881301** in full — 1 pallet, **8 bikes** on it, 0 parts, **400 lb** on one line, with both orders listed under Combined Order; the ninth bike, a Hudson E2, is declared as its own carton (point 6), so nothing is counted twice. Right: the Order Items table with the new **Lbs** column (90 = two Hudson 21 at 45 each). The carrier row — R+L selected, then RIST, Pick up and Daylight, the four that fit on this screen, FedEx nowhere — and the two photo tiles with the ... menu are the same screen.

2. Ship — four small things you asked for

WHERE	BEFORE	NOW
Order Items	To know a SKU's stock, dimensions, weight or any other detail, you had to leave Ship.	One click on the SKU opens its detail right there. If the SKU sits in more than one place, you get the same list of locations as the long-press in Double Check, with Edit on each row.
Carrier picker	Every carrier logo on every order, whether the order could use it or not — FedEx on a truck order, four truck lines on a FedEx order.	The row fills one line with the carriers this order can use, most-used first (R+L, RIST, Pick up, Daylight...), and stops before anything would be cut or wrap — a phone shows two, a desktop five. A regular order never shows FedEx there; a FedEx order shows FedEx alone . Whatever is selected always shows; ... opens the rest.
Pallet photos	Three or four thumbnails pushed the totals and the buttons below the fold on the phone.	Two thumbnails at most; the +N tile opens <i>Take photo / View all</i> .

And the green **Verified** label is gone from the Ship card — every order there is already verified.

Live on August 27: tapping 03-4041BL in Order Items opens the item straight away — 26 on hand, ROW 3 F. The carrier row and the photo tiles are in the order screenshot above; a FedEx order's row is in point 3.

3. FedEx Recipient ID, right where you ship

BEFORE

In the FedEx system the destination was found in the address book by name, or typed again from the paper. A dealer saved twice — with and without the "LLC", an old street — is two records, and picking the wrong one is a bike delivered to last year's address.

NOW

The number Ship Manager wants is the customer's AS400 account plus the two-digit ship-to (0010495 00 → 1049500). PickD keeps it and shows it as a chip on the Ship card and in Double Check, **only on FedEx orders**, with a copy button and the one instruction for Ship Manager: paste it in *Recipient ID* and the address fills itself. Orders captured before this get their number from the new **Maintenance** button on the Bay 2 watcher (preview first, then apply).

WEIGHT (LBS)

Live on August 27, order 881304 (FedEx): the **Check in FedEx · 1190100** chip with the one instruction for Ship Manager, and the carrier row holding **FedEx alone** — everything else waits under "...".

4. On the Bay 2 watcher

- **Before:** a warranty or consumer-direct order showed the channel as the customer, and the person it was for was only on the paper. **Now:** every card shows the **Ship-to** name next to the Bill-to.
- **Before:** filling the AS400 account on the orders captured before today was a script one person ran, with no way to see first what it would change. **Now:** a ... → **Maintenance** panel — one card per action with a one-line explanation, *Preview* (nothing written) and *Apply*. First action: that backfill.
- **Before:** a line the catalog did not know was written with the AS400 spelling (03-3768BLD), so registering the bike under the name on the box (03-3768BL) did not cure the order — LOW

STOCK stayed. **Now:** the line is written the way the box says it, and registering it makes the order match right away.

Already installed on the Bay 2 Mac (August 27).

5. Double Check — the LOW STOCK panel, tested on every case

BEFORE

Yesterday morning, order 881288: both Riptides flagged LOW STOCK with no location, while 145 and 76 of them sat in ROW 43 and ROW 41 under their other names. Since June that happened on seven orders — 24 "Replaced" notes between the two names in two weeks, each one a person opening Edit Order to swap what PickD could have swapped itself. And when the fix was not a sibling, the badge did not say whether the bike was unregistered, gone, reserved by another order, or just short by a few.

NOW

Double Check works the line out by itself the moment it opens, names the case, and offers only the buttons that make sense for it. No order on the floor had one today, so it was tested on a practice order with all four cases at once:

QTY 2 03-3768BL 1 FOR #800642 DIVIDE S/O 12X27 ROW 43 A

Swapped from 03-3768BLD — same bike, this name has the stock UNDO

QTY 1 03-9999XX UNREG UNKNOWN BIKE 2026 LOC —

Not in PickD — this SKU has no catalog entry

REGISTER REPLACE REMOVE

Same bike, other name (the AS400 "BLD" spelling): swapped on its own to 03-3768BL in ROW 43 A, with *Undo* on the line. **Not in PickD:** *Register* opens the Bike-or-Part form already filled in; *Replace* and *Remove* ask for a reason.

Pallet 1/11 0 / 12 ✎				
QTY	03-4984BL	LOW STOCK	0 IN STOCK (NEED 1)	ROW
1	VENTURA A1 CUES 2			25
Registered, but 0 units in any location				
REPLACE REMOVE				
QTY	03-3779RD			ROW
11	DIVIDE 21X29 2025	3 5 30		22 D
Only 113 available of 120 — ROW 22 (113)				
TAKE 113 REPLACE REMOVE				

Registered, 0 units anywhere: Replace or Remove. **Not enough** (113 of 120 in ROW 22): *Take 113* adjusts the line in one tap, or Replace / Remove.

Small fix from the test: for a second or two while the shelves were still being read, a line could say "0 units in any location" with Remove one tap away. The panel now waits until the stock is known, like the "checking..." text above it.

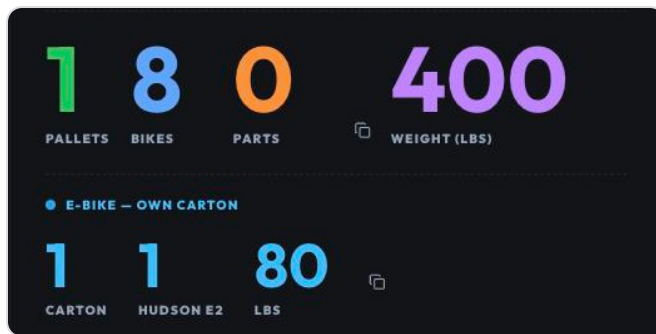

6. Ship — the e-bike, marked and ready to declare in Audit Source

BEFORE

Audit Source asks for a battery bike to be declared as its own carton, outside the pallet — even when it rides inside. Ship only said "Lithium battery label — N e-bikes": how many, not which line. The station found it by reading the names in Order Items, and a line with no name (one in five has none) gave nothing to read.

NOW

The electric line is marked in Order Items — blue edge, **E-BIKE** badge, a dot that pulses until the order ships — and under the four numbers, in the same big-figure style, one row per e-bike: **1** carton · **1** Hudson E2 · **80** lbs. A FedEx order adds the carton size on the same row (**57x37x10** in); a regular one does not need it. The copy button hands over exactly "1 carton, 1 Hudson E2, 80 lbs". And the e-bike **leaves the pallet's numbers**: Bikes and Weight count what is on the pallet — 303 / 301 reads **1 · 8 · 0 · 400** plus the carton — so nothing is typed twice. A missing weight or an unmeasured carton shows an amber **?**.

ORDER ITEMS (8)				PRINT
QTY	SKU	DESCRIPTION	LOCATION	
2	03-4041BL	HUDSON 21 2026 MIDNIGHT BLUE	ROW	3
1	03-4589GY	KOMODO 29 19 2026 RHINO	ROW	15
1	03-3845BR	SEQUEL S2 21 2026 ROOT BEER	ROW	22
1	03-4631GY	HIGHPOINT A2 V2 17 2026 GRAPHI	ROW	27
1	03-4632GY	HIGHPOINT A2 V2 19 2026 GRAPHI	ROW	27
1	03-3745GN	TRAIL X A1 21 2026 MASH	ROW	28
1	03-4038BL	HUDSON 19 2026 MIDNIGHT BLUE	ROW	33
1	03-3607GY	HUDSON E2 S/T 14 2026 THUNDER	ROW	51

Live on August 27, the same order 303 / 301 — it carried a Hudson E2 all along. Left: the pallet reads 1 · 8 · 0 · 400, and under it the e-bike in the same big figures — 1 carton · 1 Hudson E2 · 80 lbs — with the copy button; no size, this order goes by truck. Right: the line in Order Items with the blue edge and the **E-BIKE** badge (no pulse — the order has shipped).

7. Ship — four touches from the phone, tonight

- The four numbers — and the e-bike rows — **grow or shrink to the space** and never break onto a second line.
- The header reads the **whole** order numbers, **881303 / 881301**, not 303 / 301; tapping one still filters to that order.
- With the **Shipped** column off, the order card takes **60 %** of the screen.
- An order that is **only e-bikes** shows only its carton rows — there is no pallet to describe.

Mentioned only, so you know it happened

- Fourteen catalog names had ended up as "ALLEGRO A1 23 THUNDER GREY | Auto-cancel verification timeout | auto-restore on cancel" — two of them were in the FedEx dimensions file, so that sentence would have gone to FedEx as the description of the carton. Stock moves no longer glue notes onto names; the note goes to the item's note field, and the three names still carrying one were cleaned.
- The same bike had two names in the catalog and the stock moved between them with every rename (three times this year), so "which name has the stock" was a fact of the month. The AS400 "D" spellings (03-3768BLD, 03-3769BLD, 03-3779RDD) were merged into the 2-letter names the boxes use. Stock unchanged.
- Safeguards on the code side (tests run on every push) and a tidier backlog.

Still from the floor: the physical check of the merged parts (now 25 — the 22 from yesterday plus the three above). The Double Check panel above was tested on a practice order; the first real LOW STOCK order is worth a look.

Coming up

- Ship: one pulsing button for the lithium / carton alerts instead of three banners (waiting on wording).
- Opening a completed order from the Board goes straight to its Picking Summary.
- Assist mode in Double Check: two people on one multi-pallet order.
